## This report is intended to provide you with important information about your drinking water and the efforts made by the Village of Forest Park to provide safe drinking water. This report includes drinking water facts, information on violations (if applicable), and contaminants detected in your drinking water supply during calendar year 2019. Each year, we will provide you a new report. If you need help understanding this report or have general questions, please contact the person listed below. <br> Contact Name: $\quad$ Rick Barger <br> Este informe contiene información muy importante Telephone Number: 708-366-4876 sobre el agua que usted bebe. Tradúzcalo ó hable <br> E-mail: <br> rbarger@forestpark.net

 con alguien que lo entienda bien.Before we begin listing our unique water quality characteristics, here are some important facts you should know to help have a basic understanding of drinking water in general

## Sources of Drinking Water

 naturally-occurring minerals and, in some cases, radioactive material, and can pickup substances resulting from the presence of animals or from human activity.

Our source of water comes from Purchased Surface Water.
Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.

- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses.
 runoff, and septic systems.
- Radioactive contaminants, which can be naturally-occurring or be the result of oil and gas production and mining activities.

## Other Facts about Drinking Water

 information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline at (800) 426-4791
 bottled water which must provide the same protection for public health.

 EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

## Source Water Assessments

 drinking water to the citizens of Illinois. The Illinois EPA has implemented a source water assessment program (SWAP) to assist with wellhead and watershed protection of public drinking water supplies
 and suburbs (including Forest Park), while the South Water Purification Plant serves the southern areas of the City and suburbs.

## 2019 Regulated Contaminants Detected

The next several tables summarize contaminants detected in your drinking water supply. Since water is purchased from the City of Chicago, results indicated with an asterisk (*) were provided to us by them.

## 2019 Non-Regulated Contaminant Detections

 possible sources of contamination or characterizing overall water quality.

## Susceptibility to Contamination*

 Department of Water Management at 312-744-6635.

## 2019 VOLUNTARY MONITORING*

 detections for Cryptosporidium and Giardia reported so far.

 following address below:
http://www.cityofchicago.org/city/en/depts/water/supp info/water quality resultsandreports/city of chicago emergincontaminantstudy.html
Here are a few definitions and scientific terms which will help you understand the information in the contaminant detection tables.

| AL | Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow. |
| :---: | :---: |
| ALG | Action Level Goal-the level of a contaminant in drinking water below which there is no known or expected risk to health. ALGs allow for a margin of safety. |
| Avg | Regulatory compliance with some MCLs is based on running annual average of monthly samples. |
| Date of Sample^ | If a date appears in this column, the Illinois EPA requires monitoring for this contaminant less than once per year because the concentrations do not frequently change. If no date appears in the column, monitoring for this contaminant was conducted during the CCR calendar year. |
| Highest Level Detected | This column represents the highest single sample reading of a contaminant of all the samples collected in 2019. |
| MCLG | Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety. |
| MCL | Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology |
| MRDL | Maximum Residual Disinfectant Level: The highest level of disinfectant allowed in drinking water. |
| MRDLG | Maximum Residual Disinfectant Level Goal: The level of disinfectant in drinking water below which there is no known or expected risk to health. MRDLGs allow for a margin of safety. |
| mrem | millirems per year (a measure of radiation absorbed by the body) |
| N/A | Not Applicable |
| NTU | Nephelometric Turbidity Units |
| \% $\leq 0.3$ NTU | Percent of samples less than or equal to 0.3 NTU |
| $\mathrm{pCi} / \mathrm{L}$ | picocuries per liter; used to measure radioactivity |
| ppb | parts per billion or micrograms per liter (ug/L) - or one ounce in 7,350,000 gallons of water. |
| ppm | parts per million or milligrams per liter ( $\mathrm{mg} / \mathrm{L}$ ) - or one ounce in 7,350 gallons of water. |
| TT | Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water. |
| Level 1 <br> Assessment | A Level 1 assessment is a study of the water system to identity potential problems and determine (if possible) why total coliform bacteria have been found in our water system. |

| Level 2 <br> Assessment | A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E.coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions. |
| :---: | :---: |
| Level Found^ | This column represents an average of sample result data collected during the CCR calendar year. In some cases, it may represent a single sample if only one sample was collected. |
| Range of Detections^ ${ }^{\wedge}$ | This column represents a range of individual sample results, from lowest to highest that were collected during the CCR calendar year. |
| Turbidity | Turbidity is a measure of the cloudiness of the water quality and the effectiveness of our filtrations system and disinfectants. |
| Unregulated Contaminants | A maximum contaminant level (MCL) for this contaminant has not been established by either state or federal regulations, nor has mandatory health effects language. The purpose for monitoring this contaminant is to assist USEPA in determining the occurrence of unregulated contaminants in drinking water, and whether future regulation is warranted. |
| Fluoride | Fluoride is added to the water supply to help promote strong teeth. The Illinois Department of Public Health recommends an optimal fluoride level of $0.7 \mathrm{mg} / \mathrm{L}$ with a range of $0.6 \mathrm{mg} / \mathrm{L}$ to $0.8 \mathrm{mg} / \mathrm{L}$. |
| Sodium | There is no state or federal MCL for sodium. Monitoring is required to provide information to consumers and health officials who have concerns about sodium intake due to dietary precautions. If you are on a sodium-restricted diet, you should consult a physician about the level of sodium in the water. |

| Lead | Date Sampled | MCLG | Action Level (AL) | $\mathbf{9 0}^{\text {th }}$ Percentile | \# Sites Over <br> AL | Units | Violation | Likely Source of Contamination |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Lead | 2018 | 0 | 15 | 2.51 | 0 | ppb | No | Corrosion of household plumbing <br> systems; erosion of natural deposits. |

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The Village of Forest Park is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead.

| Disinfectants \& Disinfection Byproducts | Collection Date | $\begin{aligned} & \text { Highest } \\ & \text { Level } \\ & \text { Detected } \end{aligned}$ | Range of Levels Detected | MCLG | MCL | Units | Violation | Likely Source of Contamination |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| TTHMs <br> [Total Trihalomethanes] | 2019 | 37 | 18.18-56.6 | n/a | 80 | ppb | NO | Byproduct of drinking water disinfection. |
| HAA5 [Haloacetic Acids] | 2019 | 18 | 11.6-21.8 | $\mathrm{n} / \mathrm{a}$ | 60 | ppb | NO | Byproduct of drinking water disinfection. |
| Chlorine (as Cl2) | 2019 | 1.3 | 0.8-1.3 | $\begin{gathered} \text { MRDLG = } \\ 4 \\ \hline \end{gathered}$ | MRDL $=4$ | ppm | NO | Water additive used to control microbes. |
|  |  |  |  |  |  |  |  |  |
| Turbidity Data* |  |  |  |  |  |  |  |  |
| Turbidity (NTU/lowest monthly \% $\leq 0.3 \mathrm{NTU}$ ) |  | Lowest Monthly $\%$ : $100 \%$ | 100\%-100\% | n/a | $\begin{gathered} \hline \text { TT (Limit: } \\ 95 \% \leq 0.3 \\ \text { NTU) } \\ \hline \end{gathered}$ |  |  | Soil runoff |
| Turbidity ((NTU/highest single measurement) |  | 0.14 | n/a | n/a | $\begin{gathered} \text { TT (Limit } \\ 1 \text { NTU) } \\ \hline \end{gathered}$ |  |  | Soil runoff |
|  |  |  |  |  |  |  |  |  |

The percentage of Total Organic Carbon (TOC) removal was measured each month and the system met all TOC removal requirements set by IEPA, unless a TOC violation is noted in the

Violations Table
Consumer Confidence Rule
The Consumer Confidence Rule requires community water systems to prepare and provide to their customers annual consumer confidence reports on the quality of the water delivered by the systems.

| Violation Type | Violation Begin |
| :--- | :--- |

We are pleased to announce we have no violations for
2019.
$\square$ $\quad$ Violation End
